

Build the Future with Niya Tech Labs

Role: AI-First App Engineer (Mobile + Full Stack)

Experience: Fresher to 5 years (skills > years)

Location: Hybrid (with frequent client visits)

Why This Role Is Different

We're not hiring "just a developer."

We're looking for **builders who can think, ship, and own outcomes.**

At **Niya Tech Labs**, you'll work on real products used by real businesses—loyalty platforms, automation systems, and AI-driven tools.

This is a role for someone who wants to **build in the AI era**, not just watch it happen.

What You'll Build

- AI-powered mobile and web applications
- Smart workflows using LLMs (automation, recommendations, copilots)
- Customer-facing apps (loyalty, bookings, engagement platforms)
- Internal tools that replace manual processes with intelligent systems
- End-to-end features—from idea → architecture → deployment

Tech Stack (What You'll Work With)

We care about your ability to learn fast, but you'll likely touch:

Frontend / Mobile

- React Native (Expo), React.js
- Modern UI/UX systems

Backend

- Node.js / Firebase / Serverless architectures
- REST APIs + event-driven systems

Cloud & Infra

- AWS (EC2, Lambda, S3)
- Firebase (Auth, Firestore, Functions)

AI / Emerging Tech

- LLM APIs (OpenAI, etc.)
- Prompt engineering & AI workflow design
- Automation pipelines (AI-assisted decisioning)

Data & Integrations

- APIs, payments, POS integrations
- Real-time systems and analytics

What You'll Do

- Own features fully—**no hand-holding, no silos**
- Work directly with clients to understand problems
- Translate messy business needs into clean tech solutions
- Build fast, iterate faster
- Use AI as a **multiplier**, not a crutch

What We're Looking For

- Strong fundamentals in coding and system thinking
- Curiosity about AI and how it changes software
- Ability to **run independently without supervision**
- Comfort in ambiguity—startup life isn't always structured
- A **business mindset** (you understand why you're building, not just how)
- Willingness to visit clients and engage beyond code

Must-Haves

- Full Australian working rights
- Ability to provide / obtain a **Police Check**
- Comfortable with hybrid work + client site visits

Why Join Niya Tech Labs

- Build products, not tickets
- High ownership, real impact
- Learn AI + product + business together
- Work directly with founders
- Grow fast as the company scales

Bonus Points

- You've built something (app, tool, side project—even rough)
- You experiment with AI tools or automation
- You think in terms of **solutions, not tasks**

Apply

Write to us at jobs@niyatechlabs.au

- Your resume
- Links to anything you've built (GitHub / apps / demos)
- A quick note: *"What would you build with AI today?"*
